WIRE ROPES ([HTTPS://WWW.BHARATWIREROPES.COM/WIRE-ROPE-MANUFACTURER](https://www.bharatwireropes.com/wire-rope-manufacturer))

The key building block of wire rope encompasses a thin metallic wire which represents the smallest component of a wire rope. These wires are spun around the core to form a wire rope altogether. The foundation element that makes up the core can be made using non-steel materials like polypropylene,

jute or sisal. The core material relies on its tensile strength, with multiple symmetric strands lending the required structural strength.
